

CIMA Cash Management Solutions

Cannabis Dispensaries

CIMA Cash Handling provides solutions to help cannabis dispensaries **remove manual tasks, reduce time and increase security** when it comes to managing cash.

Manual cash processes found in most dispensaries consume hours of staff time each day. **The reality of repetitive cash sorting and counting requires multiple human touchpoints, creates room for errors, and security risks.**

Your front office probably has strict controls around your sales to ensure all transactions are captured, verified and secure. Does your back office process get the same attention? Cash recyclers from CIMA Cash Handling don't just automate cash counting. Besides time and labor savings, the benefits can be realized throughout your whole operation.

CIMA's dispensary solutions are best described as fit-for-purpose. Offering the best back office cash management solutions available, your dispensary can virtually eliminate the need for employees to handle money any more than necessary. Budtenders can spend more time selling products and interacting with customers. You can select a solution to grow with your operation, with more security and accountability of the money you earn.

5 Easy Steps:

In 5 simple steps, CIMA dispensary solutions eliminate most of the manual work of dealing with cash:

1. Create till floats in under a minute – no need to prepare till floats manually into separate bags.
2. Get change when you need it – quickly and directly from the CIMA machine.
3. Deposit surplus funds from the tills directly into our machine.
4. Deposit end-of-shift funds into the machine without manually counting.
5. End-of-shift, end-of-day reports provide complete visibility of all transactions at any time.

"I recently tested the CIMA recycler in comparison to another market leading recycler. After testing the CIMA head-to-head, I was pleasantly surprised by its performance. We ran the CIMA in a mid-sized store handling approximately 250K weekly in cash. We saw a rejection rate less than 1% and only 1-2 jams weekly (which base level shift managers were easily able to clear). The software ran smoothly without glitches and required a relatively low investment in training for use. Overall, the CIMA outperformed the competition in dependability, ease of use, accuracy and security. We are now implementing CIMA recyclers in all of our locations."

-- James Bean, General Manager/Owner, Craft Cannabis

Back Office Recycling Solutions

Depending on cash volumes and challenges your business faces, learn more about CIMA's leading robust and flexible solutions:

CIMA's **medium to high capacity back-office note and coin recycling solution** for retailers or venues with higher note and lower coin requirements. This platinum solution is a cost-effective option offering all the functionality and benefits you expect from a complete back office cash recycling solution.

Platino Solution:

- **AST7008S note recycler** - Utilizes 8 x roll storage modules (RSM) for recycling. Each RSM can hold up to 500 notes of a single denomination making it ideal for stores or environments where the note and coin volumes are high. The number of RSMs makes the configurability of the note recycler very flexible.
 - There are 8 x RSMs providing a total recycling capacity of up to 4,000 notes.
 - The AST7008S has a unique self-sealing, stacking bag system for up to 3,000 surplus notes. This eliminates the need for cassettes and allows CIT operators to pick up cash quickly without having to open cassettes in-store.
- Driven by CIMA's flexible CAOS device operating system, dispensaries can customize how the system works specifically in their environments.
- *Solution available with or without a coin option.*

CIMA's **high-capacity back-office note and coin recycling solution** for retailers or venues with higher note and coin requirements. As a diamond solution, this robust option has all the functionality you need and expect from a complete high-capacity back-office cash recycling solution.

Diamante Solution:

- **AST9000 note recycler** - Utilizes cassettes for recycling, featuring 4 recycling Cassettes with 1 additional overflow cassette for a total capacity of 13,600 notes. Each cassette can store up to 3,400 notes of a single denomination making it ideal for stores or environments where cash volumes are extremely high.
 - The AST9000 is highly flexible with the option of dual denomination recycling cassettes.
 - Surplus notes are stored in a dedicated deposit-only cassette with can be emptied by the CIT operator.
- Driven by CIMA's flexible CAOS device operating system, dispensaries can customize how the system works specifically in their environments.
- *Solution available with or without a coin option.*

CAOS Software

CAOS is a complete on-device management application with all the functionality required to operate CIMA cash-handling devices and connect them to 3rd party applications. CAOS seamlessly runs across the entire range of CIMA cash recycling solutions. This allows organizations to deploy various combinations of machines across the organization while still maintaining a common software platform.

Features:

- Customizable language, look and feel
- Flexible user management & web-based administration
- Channels and categories – utilizing CAOS channels allows the budtender to safely and securely put tips and gratuities directly into the TCR. The transaction can be categorized as "TIP" to securely track the \$\$.
- Accounting date and shifts
- Flexible start/end of shift processing
- Checks and ticket processing
- Flexible workflow customization

Benefits of CIMA Cash Handling Solutions

- Customize till floats and denomination mixes specifically for user types
- Eliminate manual till preparation. Quick and automatic till dispense.
- Fast and easy end-of-day cash up process. Simply pour coins into the tray and stack notes into the note feeder.
- Reduce errors by automating the dispense and deposit process
- Recycling reduces overall store cash requirements
- Reduce shrink with quick reconciliation to third party applications
